

# AERIELLE i2i STREAM

Wireless Digital Audio Device

SHARING NEW MUSIC with someone need not come with the guilt of making a pirated mix, and it doesn't have to happen via stereo speakers. The i2i Stream enables wireless streaming from a source MP3 player to i2i receivers, so new tunes can be shared the instant they're discovered. The consumer applications are obvious enough—enjoy music together on a walk, flight or public transportation. Multiple wireless channels are color-coded for painless tuning. Musicians can take demos and rough mixes everywhere they go, including rehearsals or pre-production meetings they forgot to burn CDs for.

**STREET PRICE:** first pair, \$100; additional receivers, \$70.
